

## EASY EYE SCENE

**SOFTWARE:** PhotoImpactXL  
**AUTHOR:** hillie@hillies-imageneration.com  
**TITLE:** Easy Eye Scene  
**SKILL LEVEL:** Beginner  
**TOOLS USED:** Lasso Tool, Fill

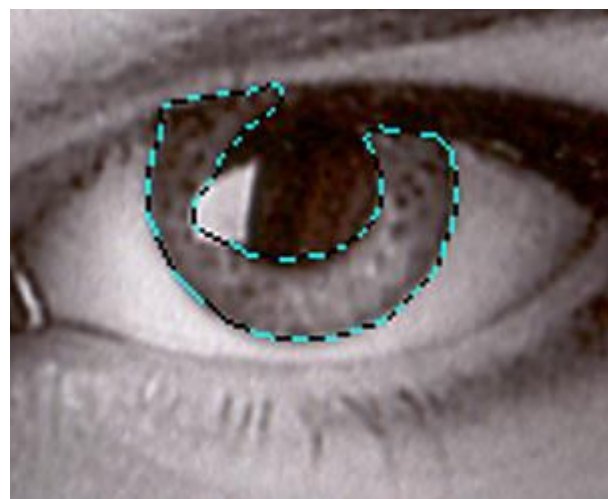

**DESCRIPTION:** Place a scene within the iris of an eye.

### INSTRUCTIONS:

**Save often.**

1. Open your image of choice. **Save As** so you are not working on the original.
2. In the **Tool Panel** select your **Lasso Tool** with **Snap to edges** unchecked, **Sensitivity 2**, **Soft edge 5** and draw (tablet) or click (mouse) your way around the iris area. Double back as shown in the picture below and avoid any highlight in the eye. Double-click inside the shape you've formed to change it into a selection (or click **Finish** on the **Attribute toolbar**).

If you want to be able to use the **Object Eraser** later to modify the selection, right click **Convert to object** now before filling. Otherwise, simply leave as is.

3. **Edit / Fill (Ctrl F) / Image** tab and browse to the image you want to fill the eye with. Click **Fit the image** and **OK**. I used one of my sunset photos.

4. On the menu bar, go to **Selection / None** to remove it. Here is my finished eye:

Hubby came along and said, What would happen if you made a mirror image... Well, here it is. Now we know why we're not created symmetrical. Creepy!!
